Report

This is my own work. I worked alongside Howard, Jack, Garrett, and Randy to complete this.

Part1:
Compiles with no errors/warnings. There are no memory leaks or memory errors. Works perfectly as far as I am aware.

Part2:
Compiles with no errors/warnings. There are no memory leaks or memory errors. Works perfectly as far as I am aware. All processes get set, then all get executed.

Part3:
Most difficult part. Compiles with no errors/warnings. There are no memory leaks or memory errors. Works perfectly as far as I am aware.

Part4:
Compiles with no errors/warning. There are no memory leaks, HOWEVER, there is a very odd situation where valgrind sometimes prints out errors running the same command. I could not figure out where the issue was coming from due to it only sometimes producing errors. I open the proc files status, syscall, and io.

Please let me know if there were any issues with the project.
